

Declaration of Conformity

for materials made of metal or metal alloys that come into contact with foodstuffs
(The references to legal regulations are based on their versions valid at the time of issue.)

We hereby declare that our products:

made of aluminium (Al)

comply with the Articles 3, 11, 15 and 17 of Regulation (EC) No 1935/2004.

The migration of aluminum salts or aluminum itself, when used as specified, is below the legal limits. Industry data available show that at present a guideline for aluminum of 5 mg / kg in food can reasonably be achieved. For this purpose, individual tests were generally dispensed with and material certificates for adherence to the material composition according to DIN / EN and corresponding scientific studies for the assessment of the materials in relation to consumer goods were used. The basis of assessment is Resolution CM / Res (2013) 9 of the CoE (Council of Europe) together with the technical annex "Metals and alloys used in food contact materials and articles".

Note: Directive (EU) 10/2011 does not apply here as the product contains no plastics. The declaration of conformity required in (EU) 10/2011 for the plastic products discussed there is therefore not mandatory for metals and alloys and is a voluntary declaration by the distributor. We confirm that we follow the rules of the Good Manufacturing Practices (GMP) Regulation (EC) No 2023/2006 and, in the absence of individual measures for the metals and alloys listed in Annex I, No. 8, these in particular according to their corrosion behavior with regard to their intended use judge.

This confirmation applies to the product delivered by us. In our publicly accessible care instructions (under contacto.de/service), the user will find information on the intended use.

Please note that plastic handles should have little or no contact with the food. If, in the specific case of application, it is assumed that the normal and foreseeable conditions of use deviate from this, a separate declaration of conformity should be obtained for this plastic. If a product made of aluminum has a coating, a separate declaration of conformity must be issued for it. All harnesses must be cleaned prior to first use of detergent residues.

Specification for intended use or restrictions:

Types of foodstuffs intended to come into contact with the material:

- Do not bring acidic, alkaline or saline foods into contact for prolonged periods

Duration and temperature of treatment and storage in contact with foodstuff:

- None restriction

Erkrath, 24.10.2019
